Period:

A **set** is a collection of objects or elements. A set is represented by listing its elements between { }. Capital letters are used to name sets. The *order* of the elements is *not* important.

- This symbol,  $\in$ , is used to indicate that an element is a member of a particular set.
  - o For example, given set  $S = \{1, 2, 3, 4, 5\}$ .  $5 \in S$  means that 5 is an element in set S.
- Similarly,  $6 \notin S$  means that 6 is NOT a member of S.
- The following are three different types of sets:

Empty set or null set	Finite set	Infinite set:
<p><b>a set that has no elements.</b> written as { } OR <math>\phi</math> <i>Do not make the common error of writing the empty set as <math>\{\phi\}</math>.</i></p>	<p><b>a set whose elements can be counted</b></p>	<p><b>a set whose elements cannot be counted because there is no end to the set</b></p>
<p>Examples: The months with 32 days. Counting #s between 1 &amp; 2</p>	<p>Examples: The set of all students in your math class. {1, 2, 3, 4, 5} {x x is a whole # less than 10}</p>	<p>Examples: The set of counting #s. The set of points on a straight line. {1, 2, 3, 4, 5, ...}</p>

### Different Types of Notation

Type of Notation	Example	In words
<p><b>Roster Form –</b> a list of the elements in { }</p>	{6, 7, 8, ...}	The set of all integers $> 5$
<p><b>Interval Notation –</b> Endpoints enclosed by parenthesis and/or brackets.</p> <p>- Brackets <b>INCLUDE</b> the # (closed interval)</p> <p>- Parenthesis <b>DO NOT INCLUDE</b> the # (open interval)</p>	<p>[3, 7]</p> <p>(3, 7)</p> <p>(3, 7]</p> <p>[3, 7)</p>	<p>All real #s <math>\geq 3</math> <b>and</b> <math>\leq 7</math></p> <p>All real #s <math>&gt; 3</math> and <math>&lt; 7</math></p> <p>All real #s <math>&gt; 3</math> and <math>\leq 7</math></p> <p>All real #s <math>\geq 3</math> and <math>&lt; 7</math></p>

\*  $\infty$  (infinity) is used when an interval has only one endpoint and will always appear next to parenthesis

[-6,  $\infty$ ) All real #s greater than or equal to -6       $(-\infty, 2)$  All real #s less than 2

<p><b>Set Notation –</b> {x x is ....} which means x such that x is .....</p>	{x x $\in$ integers and $x > 5$ }	x such that x is an integer $> 5$
---	-----------------------------------	-----------------------------------

Examples that include what a graph would look like and how it would be written as a compound inequality.

Description in Words	Interval Notation	Set Notation	Graph Example	Compound Inequality
The set of all real #s between 1 and 5, but not including 1 and 5	$(1, 5)$	$\{x   x \text{ is all real \#s } > 1 \text{ but } < 5\}$		$1 < x < 5$
The set of all real #s between 1 and 5, including 1 and 5	$[1, 5]$	$\{x   x \text{ is all real \#s } \geq 1 \text{ and } \leq 5\}$		$1 \leq x \leq 5$
The set of all real #s between 1 and 5, not including 1 but including 5	$(1, 5]$	$\{x   x \text{ is all real \#s } > 1 \text{ but } \leq 5\}$		$1 < x \leq 5$
The set of all real #s between 1 and 5, including 1 but not including 5	$[1, 5)$	$\{x   x \text{ is all real \#s } \geq 1 \text{ and } < 5\}$		$1 \leq x < 5$
The set of all real #s greater than 1	$(1, \infty)$	$\{x   x \text{ is all real \#s } > 1\}$		$x > 1$
The set of all real #s less than or equal to 5	$(-\infty, 5]$	$\{x   x \text{ is all real \#s } \leq 5\}$		$x \leq 5$

Write the following inequalities as a compound inequality, using interval notation and using set notation.

Compound Inequality: \_\_\_\_\_ Interval: \_\_\_\_\_  
 Set Notation: \_\_\_\_\_
